

Device list

Here is the list of all Yoctopuce devices connected to your host. If you want more information about each of these devices just click on serial numbers. If you want to configure one device, just click on the matching **configure** button. Each **beacon** button will toggle the blue beacon led on matching device allowing you to locate it.

Serial	Logical Name	Description	Action
VIRTHUB0-626f4de9t		VirtualHub	configure view log file
THRMSTR2-795BC		Yocto-MaxiThermistor	configure view log file beacon

THRMSTR2-795BC

THRMSTR2-795BC is a 20x45mm board with 6 entries for thermistors temperature sensors.

Kernel

Serial # THRMSTR2-795BC
Product name: Yocto-MaxiThermistor
Logical name:
Firmware: 24473
Consumption: 100 mA
Beacon: Inactive [turn on](#)
Luminosity: 1%

There is a new firmware for this device available.

Sensors

	Min	Current	Max
Thermistor 1:	22.809 °C	23.231 °C	24.252 °C
Thermistor 2:	6.575 °C	23.452 °C	24.426 °C
Thermistor 3:	23.099 °C	23.48 °C	65.238 °C
Thermistor 4:	22.493 °C	23.195 °C	24.306 °C
Thermistor 5:	22.577 °C	23.184 °C	648.211 °C
Thermistor 6:	22.868 °C	23.458 °C	646.694 °C
